Updates

1.0 - my original mod [Enhanced Gore Variety](#)

1.1 - normal mapping, bullet impacts, windscreens fx, remade missing base game textures

1.2 - instalation tweaks, no more 50gb

1.3 - video guide + minor tweaks

1.4 - NVE Suport

2.0 - Variety Update!

Created Realistic Preset, Created Exaggerated Preset, Created POSTAL Preset, Renamed Original To Gore Preset

Added NVE_Update dlcpack fxdecal.ytd , Added 4 Unique NVE gore pools.

Thanks to help from Availu from NVE TEAM, I have learned onigiri.asi is limited to 15mb files (GTAV Code Issue)

2.1 - Fixed NVE_Update dlc.rpf for Gory Preset

Recomended mods

[NextGen Euphoria](#) by me, iammmikeman - for gunshot reactions

[Better Fist Fighting](#) by Huskyyyy13 - to make npc last longer to create more melee damage effects!

Notes

In my tests it seems the game sometimes doesn't load the higher quality fxdecal.ytd included in NVE located in NVE_Update instead, at least on my system (CPU Intel Core i7-6700 Nvidia 1070-8gb). The game sometimes resorts to using base game textures.

For this reason, a compressed 14.9mb platform\textures\fxdecal.ytd file will still be included in this version. Please report any findings :)
